

Gain valuable insight into your distribution and logistics processes

OUR SOLUTION

Business & Decision, a Microsoft Gold Certified Partner, established an exclusive partnership with the 'best-in-class' freight management service and logistics technology provider, RateLinx.

RateLinx leads the way in the logistics software marketplace by applying scientific knowledge to transportation. They are the fastest-growing privately-held logistics software company in the U.S., with over 3,000 clients using their technology to process shipments.

RLinteract has integration capabilities with Microsoft Dynamics AX, Microsoft Office SharePoint Server 2007®

The cost of freight represents a significant percentage of cost-of-goods sold, yet few companies have any visibility into the component costs of their freight bills. This leaves many manufacturers and distributors at the mercy of third-party logistics (3PL) providers and their freight-routing solutions, often limiting the ability to work with the carriers that best fit their needs.

In tough economic conditions, volatile fuel prices and market challenges erode profitability and make it even more important to efficiently track and audit freight costs. Gaining visibility into facilities freight spend on a daily basis versus monthly accruals can provide immediate cost savings.

- Pre-integrated, pre-tested, no-risk freight solution for the Distribution and Manufacturing industries.
- Provides immediate monetary savings of at least 10% against business freight expense.
- Fully integrated into ERP systems to better track and audit freight costs.
- Daily visibility of both inbound and outbound freight charges.
- 'Pay as you Save' option allows companies to pay for implementation services out of actual freight savings.

Business & Decision (B&D) has developed RLinteract — the first solution to combine Business Intelligence and shipping management tools, plus offer a tight integration with ERP systems.

RLinteract offers a more simplified process for managing the routing, tracking and auditing of distribution and logistics processes. It helps companies develop lean and efficient shipping processes and reduce freight expenses.

This solution comes at an ideal time to support distribution and manufacturing organizations in weathering global economic challenges. By allowing control of both outbound and inbound freight charges, RLinteract users can realize greater savings potentials than they would through a traditional 3PL provider offering.

ABOUT US

Business & Decision is a world-class professional services company providing solutions and related consultancy in Enterprise Resource Planning, Business Intelligence, Customer Relationships Management and E-Business. Founded in 1992 and listed on the Euronext, B&D has gained its leadership by leveraging its functional and technological expertise to successfully address an organization's most critical challenges.

Business & Decision currently employs 3000 consultants worldwide. Combining technological and methodological expertise, along with practical skills and industry knowledge, we implement cutting-edge solutions with minimal risk. Our teams focus on results in terms of cost, time and quality. We are experts in market-leading software solutions and are recognized externally for the quality of projects that we deliver.

Freight savings and visibility for your organization
